| 270 | Meter | | KL7CY | Triplett Model 666-H VOM | Storage Room in Box Labeled for John Lynn | This is a very old Volt Ohm Milliamp meter and is working although the calibration is not very good. It requires a 1.5V C cell for the ohms range. There is currently no battery in it and the battery contacts are not corroded. The test leads are dried out and the insulation is cracking off of them, so the wire needs to be replaced. Also included is a very nice real leather carrying case. No minimum bid is suggested. | | | 08/09/22 |
| 271 | Meter | | K7LRB | Lodestar DM-4061 Transistor Dip Meter | Storage Room in Box Labeled for John Lynn | This Transistor Dip Meter has been tested and is working. Included are 4 plug in coils that cover from 1.5 to 45 MHz and a print out of a partial manual from the Internet. This is like a (vacuum tube) grid dip meter which is commonly used to find the resonant frequency of a tuned circuit. Suggested minimum bid of \$10. | | | 08/27/22 |

| 316 | Repeater | | N8ELA & WB6TYP | High Pro Repeater Repeater Controls R1 VHF 35C2 SN 00930016 (14.27) | Store Room | Per Ron Phillips - I believe that is a VHF repeater that we used at one time. It's operational, with crystals for our frequency. Ever since International Crystal closed down, it's very difficult to find a manufacturer of crystals. It could be sold or donated. | Sell or Donate Per Ron Phillips | | 08/29/22 |
